

## AMENDMENTS TO THE CLAIMS

1. to 3. (Canceled)

4. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;

a cooking heat source adjacent to the spit;

a control regulating both the rotary driven spit and the heat source;

the control able to be set for a predetermined period of cooking;

the control able to be set for an automatic period of warming food after the period of cooking by leaving the rotary driven spit on and lowering the amount of heat generated by the cooking heat source;

achieving lower heat by electricity supplied to the cooking heat source being cycled on and off during the period of warming food; and

~~The rotisserie food cooker of claim 3~~ where the electricity to the cooking heat source is cycled on and off during the warming of food at between 1/60<sup>th</sup> of a second and 40 seconds.

5. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;

a cooking heat source adjacent to the spit;

a control regulating both the rotary driven spit and the heat source;

the control able to be set for a predetermined period of cooking;

the control able to be set for an automatic period of warming food after the period of cooking by leaving the rotary driven spit on and lowering the amount of heat generated by the cooking heat source;

achieving lower heat by electricity supplied to the cooking heat source being cycled on and off during the period of warming food; and

~~The rotisserie food cooker of claim 3~~ where the heat source, while warming foods, is turned on and off in a duty cycle ranging from 5% to 60% on.

6. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;

a cooking heat source adjacent to the spit;

a control regulating both the rotary driven spit and the heat source;

the control able to be set for a predetermined period of cooking;

the control able to be set for an automatic period of warming food after the period of cooking by leaving the rotary driven spit on and lowering the amount of heat generated by the cooking heat source; and

~~The rotisserie food cooker of claim 1 further including~~ a switch which when activated causes food to be automatically warmed after the period of cooking.

7. (Original) The rotisserie food cooker of claim 6 further including, after the switch is activated, the food being warmed automatically for a predetermined period of time.

8. (Original) The rotisserie food cooker of claim 7 where the predetermined period of time is about one hour.

9. (Original) The rotisserie food cooker of claim 6 further including, after the switch is activated; that there is a preestablished period of time during which the time food is warmed may be adjusted.

10. (Canceled)

11. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;  
a cooking heat source adjacent to the spit;  
a control regulating both the rotary driven spit and the heat source;  
the control able to be set for a predetermined period of cooking;  
the control able to be set for an automatic period of warming food after the  
period of cooking by leaving the rotary driven spit on and lowering the  
amount of heat generated by the cooking heat source;  
a rotary knob to adjust the period of cooking; and

~~The rotisserie food cooker of claim 10~~ where the amount of time incremented or decremented from the period of cooking by a given number of degrees of rotation of the rotary knob varies with how fast the rotary knob is rotated.

12. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;  
a cooking heat source adjacent to the spit;  
a control regulating both the rotary driven spit and the heat source;  
the control able to be set for a predetermined period of cooking;  
the control able to be set for an automatic period of warming food after the  
period of cooking by leaving the rotary driven spit on and lowering the  
amount of heat generated by the cooking heat source;  
a rotary knob to adjust the period of cooking; and

~~The rotisserie food cooker of claim 10~~ where, for a given number of degrees of turn of the rotary knob, more time is incremented to the period of cooking if the rotary knob is turned at a given rate, than if the rotary knob is turned at a rate slower than the given rate.

13. (Canceled)

14. (Currently amended) A rotisserie food cooker comprising:

a rotary driven spit;  
a cooking heat source adjacent to the spit;  
a control regulating both the rotary driven spit and the heat source;  
the control able to be set for a predetermined period of cooking;  
the control able to be set for an automatic period of warming food after the  
period of cooking by leaving the rotary driven spit on and lowering the  
amount of heat generated by the cooking heat source;  
a rotary knob to adjust the period of cooking;  
a sound producing element; and

~~The rotisserie food cooker of claim 13 where rotating the rotary knob causes sounds to be produced from the sound producing element.~~

15. (Original) The rotisserie food cooker of claim 14 where a sound is produced by the sound producing element for each minute incremented by turning the rotary knob.

16. to 20. (Canceled)
